Agenda for Day 3

- Camunda Architecture Details
- Marketplace for connectors
 - Camunda Developed connectors
 - Partner Developed connectors
 - Community Developed connectors

Camunda

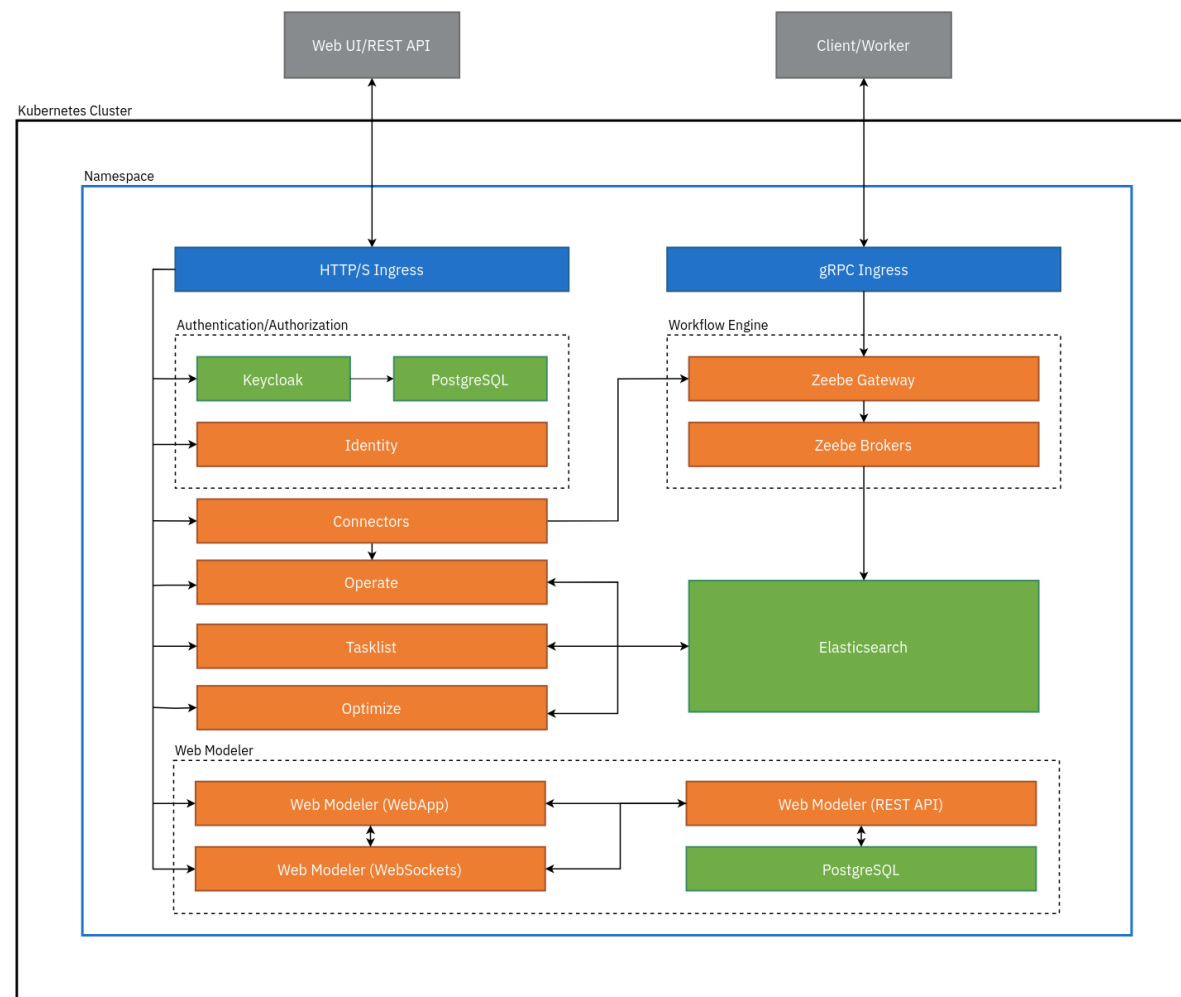

Architecture

- High Availability
- Avoid single point of failure
- Auto Scale components to increase Throughput
- Resilience to handle intermittent errors

<https://docs.camunda.io/docs/self-managed/about-self-managed/>

Camunda Platform 8 Self-Managed Architecture - Combined Ingress

High-level architecture for Camunda Platform 8 Self-Managed on Kubernetes using Camunda official Helm chart

Components List

Name	Who uses it?	Purpose
Zeebe Broker and Gateway	Infra Admin	Core engine components accepting requests from clients such as UI apps, third party integrations
Operate	BPM Admin	View deployed processes, runtime instances and real time status
Tasklist	BPM Admin	Active tasks in the system and their user assignment
Connectors	Infra Admin, Developers	Ability to interact with external systems and applications
Optimize	Business Owner	Visualize runtime performance of deployed processes via Heat Map and key dashboard metrics
Identity	Security Admin	User management and roles / access control
Web or Desktop Modeler	Process Analyst, Developers	Develop and modify business process definition (bpmn), decision table (dmn) and forms
Console	Infra Admin	Manage the cluster of resources and the health status. Includes application secrets management

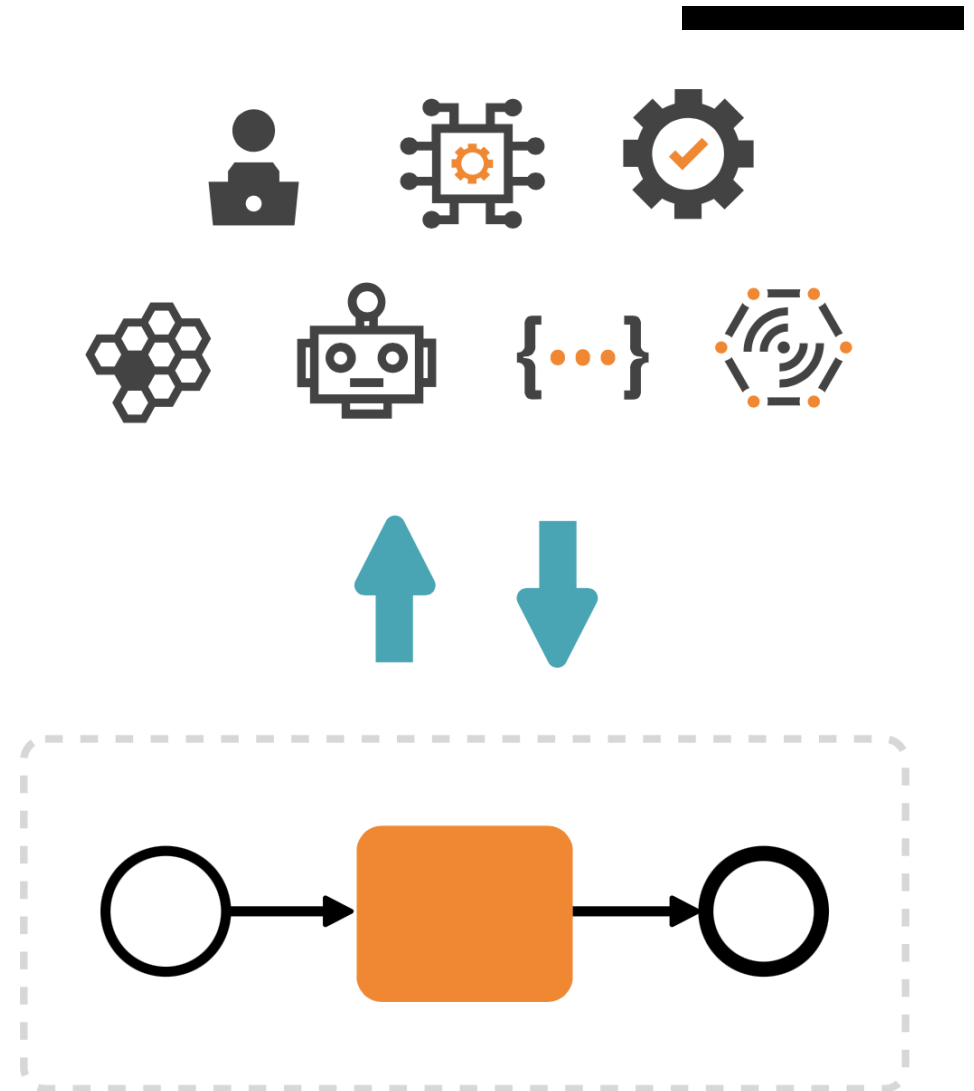

Marketplace

What is a connector?

- Allows interaction with other systems – be it internal or external apps
- Powerful bi-directional connectivity
 - Outbound
 - Inbound
- Marketplace as a hub for popular connectors
- Connector SDK provides a way to implement custom Connectors

Marketplace for Connectors

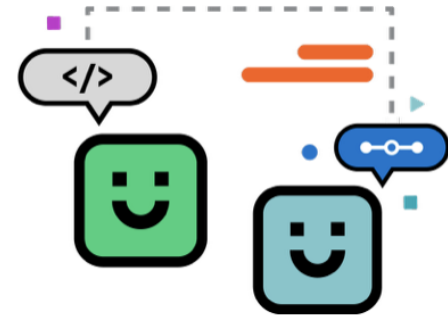

Camunda Connectors

Connectors provided by
Camunda Engineering

Partner Connectors

Connector runtimes
developed by Camunda
partners

Community Connectors

Connector runtimes
developed by the
Camunda Community

Let's visit the Marketplace !
